## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-10 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Tanner which discloses a set of wall faces and grooves with a ledge at one end of the grooves to prevent a workpiece from passing through the grooves, but allowing it to pass through the wall faces (col. 3, lines 24-37). Also Tanner states that the use a 12 point interior shape is shown, but that other well known shapes are known, e.g. 6, 8 or 16 point (col. 3, lines 44-46).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 11-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Cummings et. al. or Fulcher et. al. in view of Tanner.

Either Cummings et. al. or Fulcher et. al. shows the claimed invention except for the use of a groove in each face that forms a second receiving space that will prevent pass through of a workpiece. Tanner suggests that a driver can have such

a "notch" for the same purpose as claimed by applicant. It would therefore be obvious to one skilled in the art at the time the invention was made to modify either Cummings et. al. or Fulcher et. al. by using a notch in each face that forms a second receiving space that will prevent pass through of a workpiece because Tanner suggests the use of such a notch each face that forms a second receiving space that will prevent pass through of a workpiece.
